| Risk Matrix | | Potential consequence of harm | | |
|--|---|---|---|---|
| This risk matrix is used to identify the level of risk when presented with identified hazards. | | 1, Minor injury. Hazard can cause an illness, injury or equipment damage but to the results would not be expected to be serious. | 2. Significant injury. Hazard can result in a serious injury and or illness, over 3-day absence. | 3. Major injury. Hazard capable of causing death or serious and life-threatening injuries. |
| Likelihood of harm | 1. Unlikely – rare, though possible | Low | Low | Medium |
| | 2. Possible – could happen occasionally | Low | Medium | High |
| | 3. Probable – injury likely to occur | Medium | High | Extreme |
